

# MY.TOWN Blogger | Production Readiness Guide

Date: 31 Dec 2025

## What ships today (current code)

- Landing page with one-time payment (Yoco checkout).
- Webhook provisioning creates tenant folder, license, and rotating download token.
- Paid page delivers a personalized kit zip with installer scripts.
- WordPress connect + draft test post endpoint exists (stores WP app password encrypted server-side).
- Protected app package delivery works, but the packaged app is currently a placeholder.

## Must-have upgrades for Option 2

- BYO OpenAI key capture (encrypted storage per tenant, never shipped to client device).
- Server-side content generation that outputs preview + approve links.
- Email delivery of preview + approve links.
- High converting landing page, FAQs, training, and a support button.
- Rate limits, audit logs, and an admin kill switch.

## Key server paths

- /home/mytown/blog.mytown.ink/tenants (tenant storage)
- /home/mytown/blog.mytown.ink/assets/blogger-kit.zip (kit template)
- /home/mytown/blog.mytown.ink/packages/blogger-app-v1.tar.gz (protected app package)

## Support checklist (minimum)

- Ask for TENANT\_REF (from TENANT\_REF.txt).
- Ask for OS and exact error text.
- For WordPress issues: confirm WP URL, app password, and whether /wp-json/ is blocked.
- Never ask for screenshots of .env unless unavoidable.
